

Disclosure statement for  
E. Glen Weyl  
on manuscript  
“Should We Treat Data as Labor? Moving Beyond ‘Free’”

E. Glen Weyl is employed by and a small equity holder in Microsoft Corporation, which has been intrigued by and supported the central idea in this paper, “Data as Labor”. He is also co-founder, a member of the board, and a major equity-holder of Decide (formerly Collective Decision Engines), a privately-held Illinois Limited Liability Company that seeks to commercialize Quadratic Voting (another radical market idea) for polling, market research and other applications and holds a patent on some of these applications. Finally, this article discusses a book, *Radical Markets: Uprooting Capitalism and Democracy for a Just Society*, authored by him and from which he will receive royalties on sales.
